### **Delmock Technologies Inc. (DTI) Improves Health and Well-Being—Ethiopia Global Outreach Trip**

DTI continues to support the Office of the U.S. Surgeon General in efforts shared by HHS as outlined in the *Safe Drinking Water Act (1974)* which mandates drinking-water standards for all public water systems. We fully support the National Prevention Strategy to promote fresh, clean, uncontaminated water, which is one of our most vital resources and is essential to good human health. Building a well in Ethiopia is just one of many ways we are on a mission to promote healthy and safe community environments, empower people and eliminate health disparities in order to increase the number of people who are healthy throughout the many stages of life. DTI has aligned its principles with various HHS organizations (e.g. NIH, CDC, etc.) and the Washington Suburban Sanitary Commission (WSSC) by being an advocate for clean drinking water and a key player in the war against sickness and health illiteracy. Many disadvantaged families regularly face the arduous and daunting responsibility of getting and providing their families with clean water.

- 783 million people still rely on unimproved drinking water sources;
- 2.5 billion people still lack access to improved sanitation facilities
- Worldwide, nearly 2 billion people drink contaminated water that could be harmful to their health.

DTI is stepping up to address these critical problems. We have identified resources to ensure those groups disproportionately affected by lack of clean running water have access to good, quality water by helping to dig wells and taking it a step further by educating communities with vital information that promotes active living, mental and emotional well-being and consuming clean water.

Chief Strategy Officer (CSO), Tony Jones is leading our efforts in this health disparity. On behalf of DTI, he will visit Ethiopia for 10 days to dig a well to provide a safe water supply for a community of 300 families, visit these impacted families and strategize with leaders and heads of families about long-term quality health solutions, and provide school supplies for an Academy of 600 students along with bibles for local churches. DTI has collaborated with several impactful businesses in this effort, a host non-profit organization-GlobalCall.org, WSSC and Largo Community Church in order to significantly and positively impact the lives of many in Ethiopia. Thus, supporting individuals in expanding and transforming their minds and subsequently their lives is pivotal to a community's growth and development. This comprehensive approach is integral to the success of outreach advancements; therefore, you can fully understand why DTI is taking direct action in this cause.

Furthermore, the President/CEO, Winston DeLattiboudere shared, *“Ideally, healthy bodies work in balance with well-rounded, healthy minds. I am ecstatic that DTI continues to be a principal force in life changing endeavors like this outreach mission trip. DTI invites you to track our CSO’s journey to Ethiopia and the projects planned on Twitter, LinkedIn and Facebook.”* <https://twitter.com/Delmock>; <https://www.linkedin.com/company/delmock-technologies-inc-/>; <https://www.facebook.com/DelmockTechnologies>; #CleanWater, #WaterUtility, #DiggingWells #GlobalHealth, #RuralHealthStrategy; #CommunityServices; #ValueWater

#### **About Delmock Technologies Inc. (DTI)**

DTI is a CMMI Level III-services and development, ISO 9001:2015 certified, award-winning contractor. In 2017 was awarded the Center for Medicare and Medicaid Services (CMS) SPARC HUBZone contract, DTI has provided exceptional support to the federal government for over 16 years. It has garnered a reputation for efficiency, innovation and collaboration.
